What are the reasons?

Don't be shocked; there are more reasons which will show why soon Bangalore will become the first dead city if appropriate measures are not taken, at the right time.

Once the city was known as the most sought out city amongst all the metros, having a pleasant climate, easy availability of land, low-key politics and a decent economy. But now it's a tedious task to find property in Bangalore. Unplanned urbanization or uncontrolled growth in real-estate has severely affected the human health as well as the environment. To avail space for buildings, metros, apartments, flyovers, etc. trees are cut.
